Deployment Notes and Updates - Ark

Release Date - February 25, 2026

Improvements

Activation Email Validation for Special Characters

Activation emails can now be successfully sent to contacts with supported special characters. Input validation has been aligned with accepted characters, and users will be prompted in real time if unsupported symbols are entered.

Bank Sync: Suppression of Pending Transactions

Pending bank transactions are now suppressed to prevent duplicate entries. Only posted transactions will sync into Ark.

Journal Entries Page Performance Enhancements

Performance on the Journal Entries page has been improved, particularly when using the Accounts filter. Users should experience faster load times and smoother filtering when working with larger data sets.

Journal Entry Line Description Validation

Line descriptions within Journal Entries will now display a clear error message when they exceed the character limit. This provides immediate feedback at the point of entry and prevents save failures caused by over-length descriptions.
