Deployment Notes and Updates - Ark

Release Date: March 1, 2023

Bug fixes & incidentals:

- (5044) Encrypted files can now be downloaded from the Admin & Client portal document repositories. These files will download without a watermark, disregarding the watermark setting on the document folder configuration. Prior to this bug fix, our system was attempting, unsuccessfully, to write a watermark to these encrypted files, and ran into failures in doing so, causing the document to have download errors. To apply a watermark to these files, it is required that they are decrypted, prior to upload in Ark.
