## Deployment Notes and Updates - Ark

Release Date: March 8, 2023

### Bug fixes & incidentals:

- (5083) Allocation workbooks are now pulling correct commitment totals upon reopening of the file. Prior to the fix, if the Investor had an ampersand in their name, the Ark workbook was returning incorrect values for commitments and excluding this investor from allocation rules. We have implemented a fix that will not break the reopening of a workbook, no matter what characters are used in the Investor name.
- (5062) Logos can now be uploaded or changed, without error. Prior to this fix, Ark Client Admin users were experiencing a problem clicking the Save button, when attempting to add a new logo, when the previous logo was null. Now, Ark Client Admin users can upload or update a logo and the save button will be functioning as expected.
