Deployment Notes and Updates - Ark

Release Date - October 28, 2024

Bug Fixes

- The "Add New Investment Transaction" modal on the Investment Transactions page has been updated to include 0 qty investment transactions in both the Portfolio Company and Investment Transaction drop-downs. Previously, users encountered missing portfolio companies and slow load times when selecting from the Portfolio Company list. This update ensures that all Portfolio Company names are displayed with faster loading times.
- Investment quantities are now displaying the correct Share count on Valuation lines on the Investment Transactions page. Prior to this fix, valuation share counts did not match the investment share count.
